- Delivered highly customized B2C solution with multiple content catalog and product catalog for 5 different countries.
- Delivered highly customized B2C solution with multiple language and multiple currency with customized price factory.
- Delivered B2C digital platform for huge product catalog sizing 1 million products
- Delivered digital platform equipped with content searching, product searching capability with auto search, facet search

Experience | Customer Projects

1. Client: Simon, Market Place allowing different Vendors onboarding and selling products on a single storefront.

(Role: Hybris SME)

To design and develop a very high performance B2C digital platform powered with Hybris 6.4, designed to provide a marketplace to different vendors for uploading and selling their different products with different offers for end customer.

- High level Solution Design
- Low level reviews
- Presales Constructs
- Project estimation.
- POC for third party Marketplace.
- POC for Two-Tap integration and different API provided to support price estimations and delivery cost.
- Requirement discovery, analysis and technical design document.

2. Client: Goodyear, Germany

(Role: Technical Specialist)

Goodyear (FOS) project is an e-commerce portal powered by Hybris accelerator template, designed to promote the sale of product and to minimize the manual and repetitive work that earlier people in Goodyear had to do to maintain the existing site.

Portal has integrated various features including navigation search, facet search, auto search, sorting, pagination, promotion SAP Integration. Further it has various integrated business process, which get triggered when one customer take interest in purchasing an advertised products on sale.

- Analysis and Study of the business requirement.
- Leading the Track and story estimations.
- Preparation of the Design document LLD & HLD.
- Design and development of the Inventory Management API.
- Daily Client coordination and gathering requirements/inputs to provide best solution.
- Code reviews.

3. Client: Ralph Lauren, US

(Role: Team Lead)

Ralph Lauren project is an e-commerce shopping portal powered by Hybris accelerator template, designed to promote the sale of product and to minimize the manual and repetitive work that currently people in Ralph have to do to maintain the existing site. Also it provides user the Express Paypal to make their payment quick and easy for better user experience.

Portal has integrated various features including navigation search, facet search, auto search, sorting, pagination, promotion campaigning, wish list. Further it has various integrated business process, which get triggered when one customer take interest in purchasing an advertised products on sale.

- Analysis and Study of the business requirement.
- Leading the Track and story estimations.
- Preparation of the Design document LLD & HLD.
- Design and development of the Inventory Management API & Managing Pricelist inside hybris, product cockpit customization and cron jobs.
- Design & Development of various CMS Page and Components for PLP, PDP

4. Client: Medtronic World's third largest medical device company based out of Minneapolis, US

(Role: Senior Hybris Developer)

Medtronic Platform is a B2B Self Service Portal for Medical Entities spread across various Countries. It has been designed for Medical Entries and the CSR people to place order and help them to make purchases on behalf of other CSR people as well. It powered by Hybris Platform version 5.2. It also provides the search functionality to the CSR people where they can search the SoldTo's and can work on behalf of any CSR in his/her absence

- Designed and develop the search functionality where a CSR people can search a particular SoldTo and then can place order on his/her behalf
- Also worked closely on the Account and AARDT page design and development where logged in user can see and update all the SoldTo's and AARDT assigned to him
- worked on the Audit module where the admin user can see all the transactions related to AARDT transfers, account delete or update for all the registered CSR's

5. Client: TD-Bank, Canada

(Role: Team Lead)

The objective of this project is to provide an enhancement over mobile wallet offering to leverage NFC capabilities which will be used for making Over the Air transactions with mobile card instead of physical Debit/Credit Cards.

The application provides support to configure Credit/Debit cards on Mobile system, configure passcode to protect unauthorized usage, remove configured cards from mobile application, remove the subscription for Mobile Wallet offering, and send notifications to Mobile System for configuration success/failure.

The system is built on SOA based architecture with multi-tier service interaction. The application is built on java platform and uses JAX WS, JAX RS web services, Spring, Oracle database, XML communication.

- Involve in the end to end framework design for SOAP web services using JAXWS.
- Stories estimations and track lead role for the project and responsible for code implementation for services (14 in number).
- Code/Documents reviews, daily status tracking and reporting
- Code review, optimization and troubleshooting.
- Worked as a Client Proxy for requirement gathering/clarification (CANADA)

6. Client: TD-Bank, Canada

(Role: Team Lead)

The objective of this project is to provide an enhancement over mobile wallet offering to leverage NFC capabilities which will be used for making Over the Air transactions with mobile card instead of physical Debit/Credit Cards.

The application provides support to configure Credit/Debit cards on Mobile system, configure passcode to protect unauthorized usage, remove configured cards from mobile application, remove the subscription for Mobile Wallet offering, and send notifications to Mobile System for configuration success/failure.

The system is built on SOA based architecture with multi-tier service interaction. The application is built on java platform and uses JAX WS, JAX RS web services, Spring, Oracle database, XML communication.

- Analysis and Study of the business requirement.
- Story estimations and daily status report.
- Preparation of the Design document, Use case document and Mapping documents.
- Prepare the UML, class and sequence diagram
- Code review, Unit/System/Performance testing, Production and UAT support.

7. Client: Hartford,US

(Role: Sr Java Developer)

Senior Developer with Hartford primarily on Spring/JSF/Weblogic portal

- Assignment of stories to team-mates
- Raising risks and issues
- Raising issues faced by Development track and seeking timely resolution
- Helping the team-mates in case they were facing some problems
- Development work for individual stories that I was handling and seeing end-to-end flow that they pass testing successfully.

8. Client: TD-Bank,US

(Role: Sr Java Developer)

WCM is a migration project, where we need to migrate the existing portals/sites of the client to Tridion (CMS). Assignment of stories to team-mates

- Assignment of stories to team-mates
- Raising risks and issues
- Raising issues faced by Development track and seeking timely resolution
- Helping the team-mates in case they were facing some problems
- Development work for individual stories that I was handling and seeing end-to-end flow that they pass testing successfully

9. Client: Interglobe Enterprises ,India (Role: Java Developer)

The Web based Application (Contract Management System) is specifically designed as per the Client requirement, that the client will be using for the incentive Calculation and Payout of the Agents. AJAX/Java Scripts are used for making the interface more interactive and friendly, along with Struts for making the Application more Secure and easily Scalable. The CMS will make significant improvement in the following area :

Systematically and electronically manage documents (Agreements/Vendor Profiles)
Help streamline & manage business processes
Manage large volumes of transactions
Useful reporting for improvement

- Designing and developing the application, client interaction for requirement gathering. Worked as a team member and help other team members during any issue

OVERSEAS EXPERIENCE

- Canada work along with client

ACCOMPLISHMENTS

- 3 Times award for Leadership
- 5 Times award for Client Focused Delivery.
- 3 Times Recognized for People Growth
